. for any comments and questions, please use the Mathworks Matlab R2018.a (64-Bit)-[FirstUploads] 64 bit. What does this mean? Is it true that there are no downloads for 64 bit? Does it mean that you can't download/install any kind of file which is 64 bit? Does it mean the file is not valid for my computer? I'm confused. Thanks. A: It means you cannot download the file from the server. It doesn't mean you can't install the software. In the case of 64-bit programs it is mainly because of compatibility. The version for 32-bit is not compatible with 64-bit operating system. But the version of the software that you have downloaded is compatible with your current environment. This means you can run the 32-bit version without any problems. The system requirements for the 32-bit versions are described on the download page. For 64-bit systems there is no such information. If you are confused which version to download you can always get in touch with the vendor. Renal aquaporin-2 expression is regulated by angiotensin type 1 and type 2 receptor antagonism in 2K1C hypertensive rats. Aquaporin-2 (AQP2) is a membrane water channel predominantly expressed in the thick ascending limb of Henle's loop and the macula densa. We examined the renal expression of AQP2 in a model of unilateral 2-kidney, 1-clip (2K1C) hypertension. To determine if the changes in AQP2 expression were secondary to the elevation in blood pressure, we compared renal expression of AQP2 in 2K1C rats to 2K1C rats treated with either losartan (50 mg/kg/day) or irbesartan (10 mg/kg/day). Western analysis was performed using an antibody to AQP2. In the cortical tissue, losartan significantly decreased AQP2 expression in 2K1C and 2K1C rats (P 0.05). In the medullary tissue, AQP2 expression was unchanged in 2K1C 2d92ce491b
