

References Category:Windows management Category:Windows security Category:Windows technologyQ: File uploads randomly write data in MVC I have a strange problem with files. I have a form that sends images to my controller. When I create an instance of HttpPostedFileBase, I get the error of "Additional information: Filename must be a local file" I have even tried sending files with special characters like I have also tried many other things, which all lead me to the same result. Here are my files : Controller [HttpPost] [ValidateAntiForgeryToken] public ActionResult CreateQuoteViewModel(model) { if (ModelState.IsValid) { try { model.Quote.Add(new Quote() { Quote = model.Quote.FirstOrDefault(), Quote.QuoteNr = model.Quote.FirstOrDefault().QuoteNr }); QuoteManager.CreateNew(model); TempData["success"] = "Added";
