como é possível colocar um comentário no push notification do Android. Estou utilizando o Android sdk. A: Consegui comentar o push notification usando o android-messaging-api-java-proto 3.1.1. Não tem como fazer isso usando a API do Android SDK, você precisa desenvolver a partir de uma biblioteca.

```
PushNotificationBuilder
pushNotification = new
PushNotificationBuilder()
.setId("example-id")
.setTitle("Example title")
```

.setSubtitle("Example subtitle")
.addImage(R.drawable.image)
.addText("Hello World!")
.addAction(new PushAction.Builder().
setTitle("button").build()); byte[] data
= "foo".getBytes(Charset.forName("U
S-ASCII")); Mesmo quando fiz a
comunicação com o servidor, só
consegui colocar um comentário no
push. Fiz o teste usando a ferramenta
de desenvolvimento e não funcionou.
Q: How to add icon using ionic
Cordova plugin? I'm trying to add a
custom icon to the device/phonegap

push notification plugin but I'm not sure what I'm missing. I have

A: I'm curious what the values of $0,\dots,7$ are. Since the first nonzero value is 3, you can compute the values recursively: v_k is the smallest multiple of 3 that is $\ge\frac1k$. Thus $v_1=3$, $v_2=9$, $v_3=27$, $v_4=81$, $v_5=243$, $v_6=729$, $v_7=2187$. Then $v_k=3v_{k-1}-1$ for $k\ge2$ (and $v_1=3$), so $v_k=3^k-1$. It follows that the distance to any integer is $>\frac1k-\frac1{3k}$ and $\to\infty$ as $k\to\infty$, so there are infinitely many primes p with

$v_p = 3^p - 1 \ge 30$. Q: Login failed for user 'sa' on SQL Server I'm trying to login to SQL Server Management Studio 2012 but I'm receiving the following error: Login failed for user 'sa'. (Microsoft.AnalysisServices. AdomdClient) I've changed password and enabled windows authentication, but that didn't help. The server is running SQL Server 2012, and I'm trying to login as the sa user. I know that I don't have full control over the server as I'm just helping with some development, and it's not my machine.

I have local administrators on it, but that's it. I'm wondering whether anyone could tell me where I might start with diagnosing this issue. Thanks, Chris A: It's usually the case that when you are logged in as the sa account that you also have an instance of SSMS that is logged in as a different user. If you have an instance of SSMS open, it is running as another user. There are many ways to kill the SSMS process in order to log in, but one of the easiest ways to do this is to log off (the server if using Windows

authentication) and log back on, or log in with an account other than the sa account. That way, the SSMS instance will log off and the sa 2d92ce491b
