Jul 23, 2020 Blaupunkt Gmbh 7 612 002 Manual Added By Users Mar 31, 2018 blaupunkt gmbh 7 612 002 manual added by users Jul 23, 2020 Jul 23, 2020 Jul 23, 2020 Jul 23, 2020 A: OK, so here is the answer for future reference: Download and Install the v2.7.9 version of the script. For further reference, the current version is v2.7.10. Here is the solution that I found: Browse to: (C:\Program Files\Stardock\StarOffice\StarCalc\VBA\vba\Scripting) Open any "vba" folder in the scripting section, open this one: (E:\Delphi\delphi\excel\vba\vba\Scripting) You will find two files: Excel.Application Excel.Sheet Open Excel.Application and on the Tools menu, under the Developer tab, click Object Browser. In the Object Browser tree under the VBIDE object, you will find a new tab titled "Object". In the Object tab, double-click on the Excel Object. In the Properties dialog box, click the "Bindings" tab, then click on the "Bindings..." button. In the Bindings Properties dialog box, type "Excel" in the "Find:" field and click the "Find" button. In the Bindings Properties dialog box, select "Variable" in the "Filter Type:" field and click the "OK" button. You will now see the "Excel" object with all the properties. Open Excel.Sheet and in the Properties dialog box, type "Excel" in the "Find:" field and click the "Find" button. In the Bindings Properties dialog box, select "Variable" in the "Filter Type:" field and click the "OK" button. You will now see the "Excel" object with all the properties. EDIT 1 I was able to get this work with the updated version of the script. Download and Install the v3.8.10 version of the script. For further reference, the current 2d92ce491b
