The packaging program includes plastic and paper products used throughout the company's fulfillment centers, AmazonFresh and other operations. As part of its efforts to be environmentally friendly, Amazon is expanding its zero-waste-to-landfill model to the offices of its fulfillment centers in the U.S. Amazon told CNBC that the packaging program will cover all of its U.S. fulfillment centers by 2025, which includes the areas of operations, tech hubs and offices. As part of this effort, the company aims to source all packaging materials from closed-loop suppliers, which ultimately provides raw materials for new products. Through the packaging program, Amazon will also reduce unnecessary purchases and use plastic and paper products sparingly. "We care deeply about our planet and want to lead by example in the way we recycle and reuse," Tara Sagi, sustainability director at Amazon, said in a statement. "These programs provide a set of significant environmental and economic benefits for our operations. For our fulfillment network in particular, this program will reduce our total packaging footprint by eliminating unnecessary purchases and move us closer to our zero-waste goal." The company also said that going zero-waste will decrease operating costs and will ensure that "all plastic bottles from the global supply chain are moved to recycling by 2030." Amazon also pointed to other programs that are already in place to recycle some of its packaging. For example, Amazon employs "waste prevention technology" to recycle and reuse 90% of the packaging materials it produces, the company said. "We are proud of these accomplishments," Sagi said. "We remain committed to using our ingenuity to become a more efficient, sustainable operation, and to remain a leader in environmental responsibility and sustainability." Amazon has been making efforts to increase the environmental sustainability of its operations, including for 2d92ce491b
