Compatibility The very first release of AutoCAD was not yet fully backward compatible with previous releases. Each release of AutoCAD would introduce a number of significant changes to its interface, usually with the new release of AutoCAD initially being available for a limited period of time before being released for public purchase. In most cases, AutoCAD's user interface has been updated more frequently than the rest of the product's functionality. In recent years, version 14 and beyond have been fully backward compatible with previous releases. Previous versions of AutoCAD are no longer fully supported by Autodesk, and some changes are not fully supported in earlier versions of AutoCAD. On July 30, 2010, Autodesk announced that the next release of AutoCAD would be available on OS X. This release, AutoCAD 2011, was released on November 9, 2010. On April 26, 2012, Autodesk announced that AutoCAD will be available on Google Android, making it one of the first application based on the Android operating system.
