## **FMiner Basic [32|64bit]**

A lightweight tool to extract data from websites Create projects with a visual designer Choose your options, and go to action with a simple drag-and-drop Replaces “new” button with the “Save project as” menu option Redesign the welcome screen to give you a first-class experience Extract data from websites Scrape websites with drag-and-drop actions Perform additional tasks such as mouse clicks, clear cookies, and return to home page Built-in browser to explore the pages and search for elements Open an URL in the built-in browser, as well as save it Export tables to XLS, XLSX, CSV, or SQLite Generate statistics on results: crawled, updated, and ignored URLs Choose links to be scraped Choose the data you want to save Create the configuration for your project Saving projects in local directory A lightweight tool to extract data from websites All you have to do in order to scrape data is to create a project in the program. A project consists of several actions where you can set up the capturing process. Scraping actions include opening an URL in the built-in browser, saving an opened URL, and performing additional actions such as mouse clicks, clear cookies, and back to the home page. You may also create a flow chart, set up macro tasks, and record a sequence of actions to make things easier. You can attach elements to the actions or generate a link for a particular task. By dragging an element, you can grab it from the list of available elements. Configuration details The tool provides you with a series of configuration settings. You can choose to generate a new project, open an existing one, change it, or reset. There are also settings that you can use to customize the layout and design of your project. You can organize actions into different categories, as well as apply a new background and text color for each category. Drag-and-drop actions Despite being a lightweight tool for web scraping, you have the flexibility of performing actions with the aid of drag-and-drop. You may set up actions by attaching an element to the current action or generating a link for a specified task. Drag-and-drop support is available for the following actions: open URLs, save opened URLs, go to a URL, clear cookies, go back to

## **FMiner Basic Crack + Free License Key**

## FMiner Basic Activation Code [Win/Mac] [March-2022]

Scraper for extracting data from various websites and exporting results to text and database files. Features: Screenshot, drag-and-drop user interface, visual editor; Import/export options; Support for various websites and pages; Integrated web browser for viewing source code; Home page with tutorials, documentation and users exchange; Integrated help guide. Key features: Save the project to a file, export it, get help online, import and export tables. There is no need to download any modules because the application has been built from scratch. It is an easy to use software, with 100% Free. With 2.5 version, they have successfully managed to create an application that is clear and intuitive as well as easy to use. The interface is completely customizable, enabling users to set their preferences. This lightweight program is a truly essential tool that has to be integrated in every Internet user's toolbox. Free Download FMiner Basic 2.5 The tool helps you import various HTML files into one common database. Besides, it features a set of tools that are used for extracting data from source code, making changes to the document, and calculating references to various web pages. Import HTML files into a database, manipulate data in it To begin with, you must click Browse button and choose an HTML file that you want to import into the database. The application works fast, allowing you to import at least 500 files. You can export data from the database directly to clipboard, Excel, or even save it as a database file. The tool features a visual editor for playing with the HTML code. You may change font sizes, set margins, and type styles, while applying them to individual text elements. Furthermore, you can search for specific text strings in the document and change the search preferences and the number of results to display. Find refs to web pages in the document and open them in a browser. The tool also makes it easy to add your web pages to the database, so that you could later continue to work on them. You may filter entries by URL and run them through a list of built-in rules or build your own. Finally, you may compare documents of different sizes and web pages with various metadata. Key features: Export data to Excel, clipboard, and database; Support for various websites and web pages; Add files to the database manually; Create an index of your files. The tool includes many useful features for saving
